## PROJECTS

### AI-based Smart Hydroponics System | Spigot API, Java, Maven, TravisCI, Git

Mar 2024 – May 2024

- Developed a smart hydroponic system using ML algorithms (Lasso, KNN, ANN) and IoT sensors for optimal crop growth.
- Achieved higher accuracy in crop production, resulting in healthier and faster-developing plants.
- Demonstrated a plant growth rate of 0.9 cm/day, surpassing rates in previous IEEE papers.

### Waste Management System using IoT | Python, Flask, React, PostgreSQL, Docker

June 2023

- The system separates waste into categories: wet, dry, electronic, and plastic waste, enhancing productivity.
- Each type of waste is detected by sensors and segregated into assigned bins, with details updated on the server.

## ACHIEVEMENTS

- Presented a research paper on **AI-based Smart Hydroponics System** at ICWITE 2021. [Link](#)
- Completed eSim test by IIT Bombay (Spoken Tutorial project). [Link](#)
